

APPLICATION BACKEND TASK

YOUR TASKS

You've got a basic spring-boot application. You can open the web interface using:

<http://localhost:8080/klt>

Please create a currency converter web site which will have input fields for amount and from/to currency selection you want to exchange. Web site should look like following:

Currency Conversion

1 USD - United States Dc → INR - Indian Rupee 64.469002

Convert

** it does not have to be beautiful but functional*

Use **exchange rates** API from <https://exchangeratesapi.io/> to get all the required conversion rates.

Some points to remember:

- Use this **exchange-rates** API from <https://exchangeratesapi.io/>
- Calls to **exchange-rates** API should be proxied through the application
- Design your own **currency conversion** API
- Caching of **exchange-rates** API calls
